Coalition Security Awareness Training

Built for small businesses to educate employees on cyber threats, reduce cyber risk and help meet compliance training requirements.
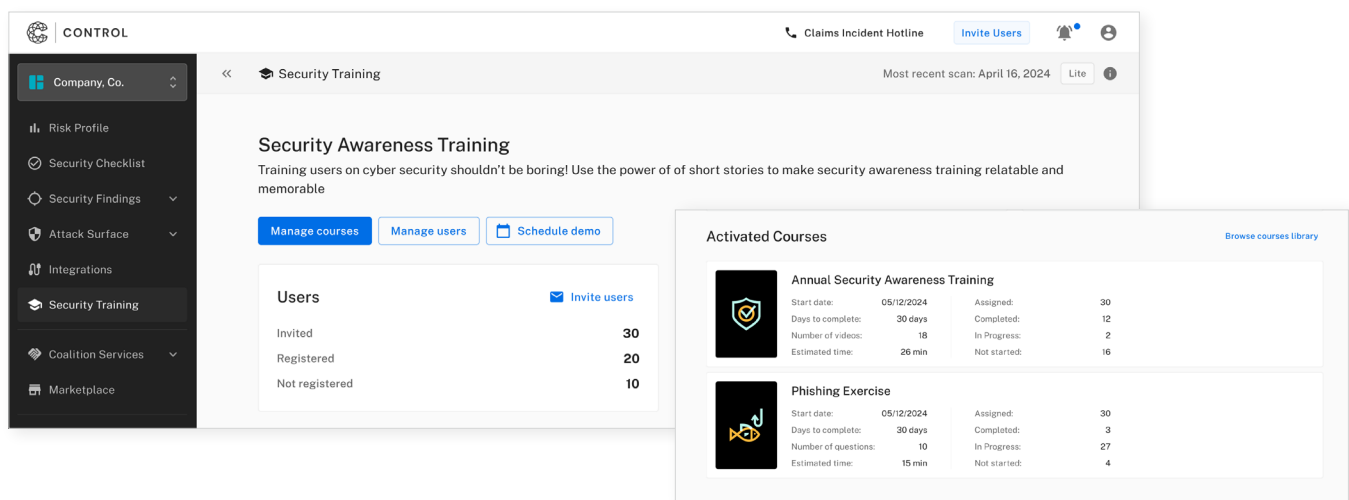

Strengthen your employees' cyber defense

Cyber incidents often start with human error. Clicking a malicious link, unknowingly sharing credentials, paying a fraudulent invoice — threat actors use these scams to trick employees and gain access to business networks. Mishandling of sensitive and protected information by employees can also put organizations at risk of non-compliance with regulatory standards.

Fortunately, businesses can use security awareness training to help employees learn how to recognize and report phishing attempts while following cybersecurity best practices.

Coalition Security Awareness Training uses engaging content, real-life stories, and live phishing simulations to help you educate employees on the most important cyber threats, meet compliance training requirements, and protect business data. Moreover, Coalition Security Awareness Training is integrated within Coalition Control®, the industry's leading cyber risk management platform. This allows Coalition policyholders to roll out training and seamlessly track their human security risk alongside other cybersecurity risks from one location.

Key Benefits

Insurance-informed training

▶ **Insights from proprietary data**
As a provider of Active Insurance, we have unique access to cyber claims and incident response data from 85,000+ policyholders. We use this data to prioritize and recommend training courses that make the biggest impact on your organization's cyber risk.

Engaging content and interactive exercises

▶ **Training videos**
Deliver memorable training through short videos, not boring presentations, that harness the power of storytelling.

▶ **Phishing exercises**
Teach employees the signs of hard-to-spot phishing tactics, like email scams, fraudulent messages, invoice change requests, gift card requests, and more.

▶ **Live simulations**
Send customizable simulations that test employees' ability to identify and report phishing emails directly from their inboxes.

Streamlined rollout and tracking

▶ **Extensive content**
Deploy training within minutes with access to an extensive library of 200+ videos available in multiple languages and regularly refreshed with the latest cyber threats.

▶ **Built-in automation**
Reduce the burden on security/IT teams with pre-designed courses, automated campaigns and reminders that nudge employees to complete assigned training. Go beyond annual training and consistently reinforce cyber best practices.

▶ **Training customization**
Choose from three training levels and tailored courses to ensure that employees receive the right training for their role.

▶ **Reports and dashboards**
Access intuitive reports and dashboards that allow to track employees' progress and analyze training effectiveness.

▶ **Integrated risk management**
Track and manage human security risk alongside other cybersecurity risks directly within Control.

Support for regulatory compliance

▶ **Compliance courses**
Meet the cybersecurity training requirements of industry compliance standards, including SOC2, PCI DSS, HIPAA and more.
